

1500 bar Four and Five Outlet Manifolds

Manifold blocks are suitable for use with all TITAN 1500 bar equipment and may be used in a number of ways to simplify the supply of oil to multiple tools during simultaneous bolt tightening operations. The photographs below show just two ways in which they can be used.

Here one T-1580 and one T-1581 are connected together to form an eight outlet manifold.

Here the same manifolds are connected together by a flexible hose of any length, to form a more versatile eight outlet manifold.
